## Flex Track

This highly flexible curtain track system makes an excellent choice for shaped walls, round enclosures, bay windows, cubicle dividers and many other applications. Made of steel and resin composite, the track can be bent to 90 degrees or more. The medium duty track can support up to 33lbs per foot with 4 carriers. Available up to 150 feet in one continuous piece. Track can be wall or ceiling mounted. Brackets hold track into shape so you can easily create even an "S" shape. Perfect for straight applications as well. Carriers are designed to move noiselessly. Several options for concealing track include a valance kit, traditional drapery pins, or optional button roller. Track can be custom cut to your desired length or you may cut it yourself with a hacksaw.

Sold by the foot - choose the components you need for your design.

## Commercial and Residential Applications

Easy Installation. Customizable.  
Flexible. Smooth. Durable.

[Order Now >>](#)

Easy and secure online ordering any time of day. Life expectancy is 2 decades. Open and close curtains by hand or use a curtain wand.

Arch Windows—Our track works the best on horizontal curve applications such as bay windows; however, to cover an arched window use the wall mount cartridge with the magnetic catch carriers. The curtain can only be stationary in this case, unable to open or close in the conventional way.

## Installation

For ceiling applications you need to order track, 3-4 carriers per foot, endcaps, and ceiling mount cartridges. The ceiling mount cartridges are screwed directly into the ceiling and are available in single and double track options. A t-bar clip is available for mounting to suspended grid ceilings.

For wall mount you need to order track, 3-4 carriers per foot, endcaps and brackets. The medium duty wall mount cartridge is a simple bracket with minimal clearance. If you need more projection, use the extended projection bracket for wall mount combined with the ceiling mount cartridges. For a wall mounted double track, use the wall mount bracket for double track with the double track ceiling cartridges.
